Notes: (b) (main scheme) M1 is for $(10+10e^{-\frac{5}{8}})e^{-\frac{1}{8}}$, or $\{10 + \text{their}(a)\}e^{-\frac{1}{8}}$

N.B. The answer is given. There are many correct answers seen which deserve M0A0 or M1A0

(c) 1st M is for $(10+10e^{-\frac{5}{8}}) e^{-\frac{T}{8}} = 3$ o.e.

 2^{nd} M is for converting $e^{-\frac{T}{8}} = k$ (k > 0) to $-\frac{T}{8} = \ln k$. This is independent of 1^{st} M.

Trial and improvement: M1 as scheme, M1 correct process for their equation (two equal to 3 s.f.) A1 as scheme
