Core Mathematics C4

Advanced Level

Thursday 15 June 2006 – Afternoon

Time: 1 hour 30 minutes

Materials required for examination

Mathematical Formulae (Green)

Items included with question papers

Nil

Candidates may use any calculator EXCEPT those with the facility for symbolic algebra, differentiation and/or integration. Thus candidates may NOT use calculators such as the Texas Instruments TI 89, TI 92, Casio CFX 9970G, Hewlett Packard HP 48G.

Instructions to Candidates

In the boxes above, write your centre number, candidate number, your surname, initial(s) and signature.

Check that you have the correct question paper.

When a calculator is used, the answer should be given to an appropriate degree of accuracy.

You must write your answer for each question in the space following the question.

Information for Candidates

A booklet 'Mathematical Formulae and Statistical Tables' is provided.

Full marks may be obtained for answers to ALL questions.

The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2).

There are 7 questions in this question paper.

The total mark for this paper is 75.

The total mark for this paper is 75.
There are 20 pages in this question paper. Any blank pages are indicated.

Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled.

You must show sufficient working to make your methods clear to the examiner. Answers without working may gain no credit.

1. A curve C is described by the equation

$$3x^2 - 2y^2 + 2x - 3y + 5 = 0.$$

Find an equation of the normal to C at the point $(0, 1)$, giving your answer in the form $ax + by + c = 0$, where a , b and c are integers.

$$f(x) = \frac{3x-1}{(1-2x)^2}, \quad |x| < \frac{1}{2}.$$

Given that, for $x \neq \frac{1}{2}$, $\frac{3x-1}{(1-2x)^2} = \frac{A}{(1-2x)} + \frac{B}{(1-2x)^2}$, where A and B are constants,

(a) find the values of A and B .

(3)

(b) Hence, or otherwise, find the series expansion of $f(x)$, in ascending powers of x , up to and including the term in x^3 , simplifying each term.

(6)

Leave
blank

Figure 1

(a) Find, by integration, the area of the shaded region.

(3)

(b) Find the volume of the solid generated.

(6)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

blank

Figure 2

$$x = \sin t, \quad y = \sin \left(t + \frac{\pi}{6}\right), \quad -\frac{\pi}{2} < t < \frac{\pi}{2}.$$

- (a) Find an equation of the tangent to the curve at the point where $t = \frac{\pi}{6}$.

(6)

- (b) Show that a cartesian equation of the curve is

$$y = \frac{\sqrt[3]{3}}{2}x + \frac{1}{2}\sqrt[3]{1-x^2}, \quad -1 < x < 1.$$

(3)

Leave
blank

- $$\mathbf{r} = 6\mathbf{i} + 19\mathbf{j} - \mathbf{k} + \lambda(\mathbf{i} + 4\mathbf{j} - 2\mathbf{k}).$$

- (a) Find the values of a and b .

(3)

(b) Find the position vector of point P .

(6)

(c) show that the points A , P and B are collinear and find the ratio $AP:PB$.

(4)

Leave
blank

6.

Figure 3

Figure 3 shows a sketch of the curve with equation $y = (x-1) \ln x$, $x > 0$.

(a) Complete the table with the values of y corresponding to $x = 1.5$ and $x = 2.5$.

x	1	1.5	2	2.5	3
y	0		$\ln 2$		$2 \ln 3$

Given that $I = \int_1^3 (x-1) \ln x \, dx$, (1)

(b) use the trapezium rule

(i) with values of y at $x = 1, 2$ and 3 to find an approximate value for I to 4 significant figures,

(ii) with values of y at $x = 1, 1.5, 2, 2.5$ and 3 to find another approximate value for I to 4 significant figures. (5)

(c) Explain, with reference to Figure 3, why an increase in the number of values improves the accuracy of the approximation. (1)

(d) Show, by integration, that the exact value of $\int_1^3 (x-1) \ln x \, dx$ is $\frac{3}{2} \ln 3$. (6)

Leave
blank

7.

The surface area of the cube is increasing at a constant rate of $8 \text{ cm}^2 \text{ s}^{-1}$.

(a) $\frac{dx}{dt} = \frac{k}{x}$, where k is a constant to be found,

(4)

$$(b) \quad \frac{dV}{dt} = 2V^{\frac{1}{3}}.$$

(4)

(c) solve the differential equation in part (b), and find the value of t when $V = 16\sqrt{2}$.
