## Pearson Edexcel GCE Mathematics

### Core Mathematics 2 (6664/01)

#### **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at <u>www.edexcel.com</u>.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

www.edexcel.com/contactus

#### Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

Summer 2017 Publications Code xxxxxxx\* All the material in this publication is copyright © Pearson Education Ltd 2017

#### General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

### PEARSON EDEXCEL GCE MATHEMATICS

### General Instructions for Marking

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper or ag- answer given
- L or d... The second mark is dependent on gaining the first mark

- 4. All A marks are `correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

#### **General Principles for Core Mathematics Marking**

(But note that specific mark schemes may sometimes override these general principles).

#### Method mark for solving 3 term quadratic:

#### 1. Factorisation

$$(x^{2}+bx+c) = (x+p)(x+q)$$
, where  $|pq| = |c|$ , leading to x = ...

$$(ax^2 + bx + c) = (mx + p)(nx + q)$$
, where  $|pq| = |c|$  and  $|mn| = |a|$ , leading to  $x = ...$ 

#### 2. Formula

Attempt to use the correct formula (with values for a, b and c).

#### 3. Completing the square

Solving  $x^2 + bx + c = 0$ :  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to x = ...

#### Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1.  $(x^n \rightarrow x^{n-1})$ 

#### 2. Integration

Power of at least one term increased by 1.  $(x^n \rightarrow x^{n+1})$ 

#### <u>Use of a formula</u>

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

#### Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

### **Mathematics C2**

6664

Question Number	Scheme	Marks
	$(3-\frac{1}{3}x)^{5}$ -	
1.	$3^{5} + {}^{5}C_{1}3^{4}(-\frac{1}{3}x) + {}^{5}C_{2}3^{3}(-\frac{1}{3}x)^{2} + {}^{5}C_{3}3^{2}(-\frac{1}{3}x)^{3}$	
1.	First term of 243	B1
	$\left({}^{5}C_{1} \times \ldots \times x\right) + \left({}^{5}C_{2} \times \ldots \times x^{2}\right) + \left({}^{5}C_{3} \times \ldots \times x^{3}\right) \ldots$	M1
	$=(243) -\frac{405}{3}x + \frac{270}{9}x^2 - \frac{90}{27}x^3$	A1
	$=(243)-135x+30x^2-\frac{10}{3}x^3$	A1 (4)
	3	(4) [4]
Alternative method	$\left(3 - \frac{1}{3}x\right)^5 = 3^5 \left(1 - \frac{x}{9}\right)^5$	
	$3^{5}(1 + {}^{5}C_{1}(-\frac{1}{9}x) + {}^{5}C_{2}(-\frac{1}{9}x)^{2} + {}^{5}C_{3}(-\frac{1}{9}x)^{3} \dots)$	
	Scheme is applied exactly as before	
	<b>Notes</b> B1: The constant term should be 243 in their expansion	
	M1: Two of the three binomial coefficients must be correct and must be with the correct power	r of <i>x</i> .
	Accept ${}^{5}C_{1}$ or $\begin{pmatrix} 5\\1 \end{pmatrix}$ or 5 as a coefficient, and ${}^{5}C_{2}$ or $\begin{pmatrix} 5\\2 \end{pmatrix}$ or 10 as another and ${}^{5}C_{3}$ or $\begin{pmatrix} 5\\3 \end{pmatrix}$ or	: 10 <b>as</b>
	<b>another</b> Pascal's triangle may be used to establish coefficients. NB: If they only include two of these terms then the M1 may be awarded.	the first
	A1: Two of the final three terms correct – may be unsimplified i.e. two of $-135x + 30x^2 - \frac{10}{3}$	$x^3$
	correct, or two of $-\frac{405}{3}x + \frac{270}{9}x^2 - \frac{90}{27}x^3$ (may be just two terms)	
	A1: All three final terms correct and simplified. (Can be listed with commas or appear on sepa	rate lines.
	Accept in reverse order.) Accept correct alternatives to $-\frac{10}{3}$ e.g. $-3\frac{1}{3}$ or $-3.3$ the recurring n	nust be
	clear. 3.3 is not acceptable. Allow e.g. $+ -135x$	
	e.g. The common error $3^5 + {}^{5}C_1 3^4 (-\frac{1}{3})x + {}^{5}C_2 3^3 (-\frac{1}{3})x^2 + {}^{5}C_3 3^2 (-\frac{1}{3})x^3 = (243) - 135x - 90x^2$	$-30x^{3}$
	would earn B1, M1, A0, A0, so 2/4	
	If extra terms are given then isw No negative signs in answer also earns B1, M1, A0, A0	
	If the series is divided through by 3 at the final stage after an error or omission resulting in all of three coefficients then apply scheme to series before this division and ignore subsequent we	
	Special Case: Only gives first three terms = $(243) - 135x + 30x^2$ or $243 - \frac{405}{3}x + \frac{270}{9}x$	c <sup>2</sup>
	Follow the scheme to give B1 M1 A1 A0 special case. (Do not treat as misread.)	
	Answers such as $243 + 405 - \frac{1}{3}x + 270 - \frac{1}{9}x^2 + 90 - \frac{1}{27}x^3$ gain no credit as the binomial coefficient of the binomial co	fficients
	are not linked to the x terms.	
	1	

Question Number	Scheme	Marks
2.	$\frac{\sin x}{16} = \frac{\sin 50^{\circ}}{13}$	M1
	$(\sin x) = \frac{16 \times \sin 50}{13} (= 0.943 \text{ but accept } 0.94)$	A1
	<i>x</i> = awrt 70.5(3) <b>and</b> 109.5 <b>or</b> 70.6 and 109.4	dM1 A1 (4) [4]
	Notes	
	M1: use sine formula correctly <b>in any form.</b> Allow awrt 0.77 for $\sin 50^{\circ}$ A1: give the correct value or correct expression for $\sin x$ (this implies the M1 mark).	
	If it is given as expression they do not need degrees symbol. $\frac{\sin 50 \times 16}{13}$ is fine,	
	If this is given as a decimal allow answers which round to 0.94. Allow awrt $-0.323$ (radians) here but no further marks are available. If they give this as x (not sinx) and do not recover this is A0	
	dM1: Correct work leading to $x=$ (via inverse sin) expression or value for sinx If the previous A mark has been awarded for a correct expression then this is for 70.5 or 109.5 (allow for 70.6 or 109.4).	
	If the previous A mark was not gained, e.g. rounding errors were made in rearrant sine formula then award dM1 for evidence of use of <b>inverse sin in degrees</b> on the sinx (may need to check on calculator).	
	<b>NB</b> 70.5 following a correct sine formula will gain M1A1M1. A1: deduce and state <b>both of the answers</b> $x = 70.5$ and 109.5 (do not need degrees) A these. Also accept 70.6 and 109.4.	Accept awrt
	(Second answer is sometimes obtained by a long indirect route but still scores A1)	
	If working in radians throughout, answers are 1.23 and 1.91 and this can be awarded (Working with 50 radians gives probable answers of -0.3288 and 3.47 giving M1A1N	
	<b>Special case:</b> Wrong labelling of triangle. This simplifies the problem as there is only for angle $x$ . So it is not treated as a misread. If they find the missing side as awrt 12.6 find an angle or its sine or cosine then give M1A0M0A0	
	Alternative Method using cosine rule Let $BC = a$ .	
	M1: uses the cosine rule to form to form a three term quadratic equation in <i>a</i> (e.g. $a^2 - 32a\cos 50^\circ + 87 = 0$ or $a^2 - awrt 20.6a + 87 = 0$ though allow slips in signs r	earranging)
	A1: Solves and obtains a correct value for <i>a</i> of awrt 14.6 or awrt 5.95. dM1: A correct full method to find (at least) one of the two angles. May use cosine r find angle <i>BAC</i> and then use sine rule. As in the main scheme, if the previous A more	
	find angle <i>BAC</i> and then use sine rule. As in the main scheme, if the previous A mark awarded then they should obtain one of the correct angles for this mark. A1: deduces both correct answer as in main scheme.	ands Deen
	<b>NB</b> obtaining only one correct angle will usually score M1A1M1A0 in any method.	

Question Number				S	cheme				Marks
3.		x	0	0.5	1	1.5	2		
5.		у	1	2.821	6	12.502	26.585		
(a)	$\{At x = 1,\}$	y = 6 (allo	ow 6.000 or	r even 6.00)					B1 cao
(b)	$\frac{1}{2} \times 0.5$ ;								(1) B1 oe
	4	+ 26.585+	2(2.821+	their 6+12.:	502 )}	For s	tructure of {	·};	M1 <u>A1ft</u>
	$\frac{1}{2} \times 0.5 \left\{ 1 + \right\}$	26.585+2	2(2.821+	6+12.502)}	$=\frac{1}{4}(70.23)$	1) = 17.557.	$.\} = awrt 17.$	<u>};</u> 56	A1
(c)	10 + "17.56								(4) B1ft (1)
					Notes				[6]
(a) (b)	B1: 6 B1: for usin	g ±×0.5 o	r ½ or equ	ivalent.	10000				
	B1: for using $\frac{1}{2} \times 0.5$ or $\frac{1}{4}$ or equivalent. M1: requires the correct {} bracket structure. It needs the first bracket to contain first <i>y</i> value <b>plus</b> last <i>y</i> value and the second bracket to be multiplied by 2 and to be the summation of the remaining <i>y</i> values in the table with no additional values. If the only mistake is a copying error or is to omit one value from 2nd bracket this may be regarded as a slip and the M mark can be allowed (An extra repeated term forfeits the M mark however). M0 if values used in brackets are <i>x</i> values instead of <i>y</i> values			alues in from 2nd					
	A1ft: for the			,	through can	didate's y va	alue found in	n part (a).	
	A1: for answer which rounds to 17.56 <b>NB</b> : Separate trapezia may be used: B1 for 0.25, M1 for $1/2 h(a + b)$ used 3 or 4 times (and A1ft if it is all correct) Then A1 as before.								
	-	nal answer	implies th	at the calcul	ation has bee		/	scores B1 M1 A ull marks can be	
(c)	B1ft: 10 + tl (May be obt				again with a	all values for	r y increased	by 5)	

## Summer 2017www.mystudybro.comPast Paper (Mark Scheme)This resource was created and owned by Pearson Edexcel

Question Number	Scheme	Marks
<b>4.</b> (a)	Usually answered in radians: Uses $BCD = 3.5 \times (angle)$ , $= 3.5 \times 1.77 = 6.195$ (m) (accept awrt 6.20)	M1 A1 (2
(b)	Area = $\frac{1}{2}(3.5)^2 \times 1.77 = 10.84$ (m <sup>2</sup> )	M1 A1
(c)	Area of triangle = $\frac{1}{2} \times 3.7 \times 3.5 \times \sin(\text{angle})$ , = $\frac{1}{2} \times 3.7 \times 3.5 \times \sin(\frac{\pi}{2} - \frac{1.77}{2})$ (=awrt 4.1)	(2 M1, A1
	Total area = $"10.84"+2 \times "4.101"$ = 19.04	M1 A1cao
		(4
	Notes	
(a)	M1: uses $s = 3.5 \times \theta$ with $\theta$ in radians or completely correct work in degrees	
	A1: awrt 6.20 or just 6.2 (do not need to see units) Correct answer can imply the method.	
(b)	M1 for attempt to use $A = \frac{1}{2} \times 3.5^2 \times \theta$ (Accept $\theta$ in degrees.)	
	A1 for awrt 10.84 (do not need to see units) isw if correct answer is followed by 10.8. Correct can imply the method.	ct answer
(c)	M1: Uses area of triangle $\frac{1}{2} \times 3.7 \times 3.5 \times \sin(\text{angle})$ Must be correct method for area of triangle	le but may
	be less direct.	
	A1: Correct expression using correct angle i.e. $\frac{\pi}{2} - \frac{1.77}{2}$ or awrt 0.69 or awrt 39 degrees (need	l at least 2
	sf if no other work seen, but may be implied by correct final answer) If correct expression is isw (so e.g. isw an answer of 0.0775 implying angle set to degrees on calculator) M1: Adds <b>twice</b> their <b>second calculated area</b> (even if rectangle or segment) to their sector an	rea (may
	have been slips or errors in one or both formulae – such as missing ½ or mixture of degrees a or weak attempt at triangle area) so M0A0M1A0 is a possible mark distribution	
	A1: 19.04 cao (common answer through insufficient accuracy is 19.08 which loses final mar <b>Special Case</b> . The mark profile M1A0M1A0M1A0M1A0 can be given if the angle is misune as $1.77\pi$ or as <i>AFB</i> for example	
	If "10.84"+ $3.5 \times 3.7 \sin(\text{angle})$ is used then this can gain both M marks and the A marks if	correct.
	But use of $3.5 \times 3.7 \sin(\text{angle})$ and later doubled and added to "10.84" is 1 <sup>st</sup> M0, 2 <sup>nd</sup> M1.	

Question number	Scheme	Marks
5	$x^2 + y^2 - 10x + 6y + 30 = 0$	
(a)	Uses any appropriate method to find the coordinates of the centre, e.g achieves $(x \pm 5)^2 + (y \pm 3)^2 = \dots$ Accept ( $\pm 5, \pm 3$ ) as indication of this.	M1

Summer 2017 Past Paper (Mark Scheme)

www.mystudybro.com This resource was created and owned by Pearson Edexcel **Mathematics C2** 

6664

	Centre is (5, – 3).		A1	
(b) Way 1	Uses $(x \pm "5")^2 - "5^2" + (y \pm "3")^2 + ($		M1	(2)
	<i>r</i> = 2		A1cao	
Or Way 2	Using $\sqrt{g^2 + f^2 - c}$ from $x^2 + y^2 + stated$ or correct working)	+2gx+2fy+c=0 (Needs formula	M1	(2)
	<i>r</i> = 2		A1	
(c) Way 1	Use $x = 4$ in <i>an</i> equation of circle and	obtain equation in y only	M1	(2)
	e.g $(4-5)^2 + (y+3)^2 = 4$ or	$4^2 + y^2 - 10 \times 4 + 6y + 30 = 0$		
	Solve their quadratic in y and obtain t	<b>wo</b> solutions for <i>y</i>	dM1	
	e.g. $(y+3)^2 = 3$ or $y^2 + 6y + 6 = 0$	0 so $y = -3 \pm \sqrt{3}$	A1	
Or Way 2	$\mathcal{Q}$	Divide triangle <i>PTQ</i> and use Pythagoras with $"r"^2-("5"-4)^2 = h^2$ ,	M1	(3)
	T	Find <i>h</i> and evaluate " $-3$ " $\pm h$ . May recognise (1, $\sqrt{3}$ , 2) triangle.	dM1	
	h r	So $y = -3 \pm \sqrt{3}$		
	$\downarrow /$ $P$		A1	
				(3) [7]

www.mystudybro.com This resource was created and owned by Pearson Edexcel

Notes
Parts (a) and (b) can be marked together M1 as in scheme and can be <u>implied</u> by $(\pm 5, \pm 3)$ May be awarded for writing LHS as $(x \pm 5)^2 + (y \pm 3)^2 =$
for by comparing with $x^2 + y^2 + 2gx + 2fy + c = 0$ to write down centre $(-g, -f)$ directly A1: $(5, -3)$ . This correct answer implies M1A1
M1 for a <b>full</b> correct method leading to $r =$ , or $r^2$ = with their 5, their -3, their 25 and their 9 and their "-30". Completion of square method errors result in <b>M0</b> here. Usually $r = 4$ or $r = 16$ imply M0A0 A1 2 cao Do not accept $r = \pm 2$ unless it is followed by $(r = )$ 2 The correct answer with no wrong work seen implies M1A1
<b>Special case</b> : if centre is given as $(-5, -3)$ or $(5, 3)$ or $(-5, 3)$ allow <b>M1A1</b> for $r = 2$ worked correctly. i.e. $r^2 = "25" + "9" - 30$ <b>M1</b> : <i>Way 1</i> : Use $x = 4$ in a circle equation (may have wrong centre and/or radius) to obtain an equation in <i>y</i> only or <i>Way 2</i> . Uses geometry to find equation in <i>h</i> (ft on their radius and centre) <b>dM1</b> : (needs first method mark) Solve their quadratic in <i>y</i> or <i>Way 2</i> . Uses their <i>h</i> and their <i>y</i> coordinate correctly <b>A1</b> : cao

Summer 2017 Past Paper (Mark Scheme)

www.mystudybro.com This resource was created and owned by Pearson Edexcel

	(Mark Scheme) I his resource was created and owned by Pearson Edexcel	66
Question Number	Scheme	Marks
<b>6.</b> (a)	Attempt $f(3)$ or $f(-3)$ Use of long division is M0A0 as factor theorem was required.	M1
	f(-3) = 162 - 63 - 120 + 21 = 0 so $(x + 3)$ is a factor	A1
		(2)
(b)	Either (Way 1): $f(x) = (x + 3)(-6x^2 + 11x + 7)$	M1A1
	= (x + 3)(-3x + 7)(2x + 1) or $-(x + 3)(3x - 7)(2x + 1)$	M1A1
		(4)
	Or (Way 2) Uses trial or factor theorem to obtain $x = -1/2$ or $x = 7/3$ Uses trial or factor theorem to obtain both $x = -1/2$ and $x = 7/3$	M1 A1
	Puts three factors together (see notes below) $1/2$ and $x = 7/3$	M1
	Correct factorisation : $(x+3)(7-3x)(2x+1)$ or $-(x+3)(3x-7)(2x+1)$ oe	A1
		(4)
	Or (Way 3) No working three factors $(x + 3)(-3x + 7)(2x + 1)$ otherwise need working	M1A1M1A1 (4)
(c)	$2^{y} = \frac{7}{3}, \rightarrow \log(2^{y}) = \log\left(\frac{7}{3}\right)$ or $y = \log_{2}\left(\frac{7}{3}\right)$ or $\frac{\log(7/3)}{\log 2}$	B1, M1
	$2 - \frac{1}{3}, \rightarrow \log(2) - \log(\frac{1}{3})$ or $y - \log_2(\frac{1}{3})$ or $\frac{1}{\log 2}$	D1, W11
	$\{y=1.222392421\} \Rightarrow y=$ awrt 1.22	A1
		(3) [9]
	Notes	[7]
(a)	M1 for attempting either $f(3)$ or $f(-3)$ – with <b>numbers substituted into expression</b>	
	A1 for calculating $f(-3)$ correctly to 0, and they must state $(x + 3)$ is a factor for A1 (or eq	uivalent ie.
	QED, $\Box$ or a tick). A conclusion may be implied by a preamble, "if $f(-3) = 0$ , (x+3) is a factorized for the formula of the second s	tor".
	$-6(-3)^3-7(-3)^2 + 40(-3) + 21 = 0$ so $(x + 3)$ is a factor of $f(x)$ is M1A1 providing bracketing	
(b)	1 <sup>st</sup> M1: attempting to divide by $(x + 3)$ leading to a 3TQ beginning with the correct term, us	-
	This may be done by a variety of methods including long division, comparison of coefficien inspection etc. Allow for work in part (a) if the result is used in (b).	ts,
	1 <sup>st</sup> A1: usually for $(-6x^2 + 11x + 7)$ Credit when seen and use isw if miscopied	
	$2^{nd}$ M1: for a <i>valid</i> * attempt to factorise their quadratic (* see notes on page 6 - General Prin Core Mathematics Marking section 1)	•
	$2^{nd}$ A1 is cao and needs all three factors together fully factorised. Accept e.g. $-3(x + 3)(x - 1)(x - 2)(x $	$\frac{1}{3}(2x+1)$
	but $(x + 3)(x - \frac{7}{3})(-6x - 3)$ and $(x + 3)(3x - 7)(-2x - 1)$ are A0 as not fully factorised.	
	Ignore subsequent work (such as a solution to a quadratic equation.) Way 2: The second M mark needs three roots together so $\pm 6(x-\alpha)(x-\beta)(x+3)$ or equiva	lent where
	they obtained $\alpha$ and $\beta$ by trial, so if correct roots identified, then $(x+3)(3x-7)(2x+1)$ c	an gain
	M1A1M1A0.	
	N.B. Replacing $(-6x^2 + 11x + 7)$ (already awarded M1A1) by $(6x^2 - 11x - 7)$ giving	
	(x+3)(3x-7)(2x+1) can have M1A0 for factorization so M1A1M1A0	
(c)	B1: $2^{y} = \frac{7}{3}$	
	M1: Attempt to take logs to solve $2^y = \alpha$ or $2^y = 1/\alpha$ , where $\alpha > 0$ and $\alpha$ was a root of their factors.	ctorization.
	A1: for an answer that rounds to 1.22. If other answers are included (and not "rejected") suc or $-1$ lose final A mark	h as $\ln(-3)$
	<b>Special case:</b> Those who deal <b>throughout</b> with $f(x) = 6x^3 + 7x^2 - 40x - 21$	
	They may have full credit in part (a). In part (b) they can achieve a maximum of M1A0M1A they return the negative sign to give the correct answer. This is then full marks. Part (c) is for could lose 2 marks on the factorisation. (Like a misread)	

Question Number	Scheme	Marks
7. (i)	Use of power rule so $\log(x+a)^2 = \log 16a^6$ or $2\log(x+a) = 2\log 4a^3$ or	M1
	$\log(x+a) = \log(16a^{6})^{\frac{1}{2}}$	
	Removes logs and square roots, or halves then removes logs to give $(x+a) = 4a^3$	M1
	Or $x^2 + 2ax + a^2 - 16a^6 = 0$ followed by factorisation or formula to give $x = \sqrt{16a^6} - a$	1111
	$(x =) 4a^3 - a$ (depends on previous M's and must be this expression or equivalent)	A1cao ( <b>3</b> )
(ii) Way 1	$\log_3 \frac{(9y+b)}{(2y-b)} = 2$ Applies quotient law of logarithms	M1
	$\frac{(9y+b)}{(2y-b)} = 3^2$ Uses $\log_3 3^2 = 2$	M1
	$(9v+b) = 9(2v-b) \Longrightarrow v =$ Multiplies across and makes y the	M1
	$y = \frac{10}{9}b$ subject	A1cso
Wow 2	, ,	(4)
Way 2	Or: $\log_3(9y+b) = \log_3 9 + \log_3(2y-b)$ 2 <sup>nd</sup> M mark	M1
	$\log_3(9y+b) = \log_3 9(2y-b)$ 1 <sup>st</sup> M mark	M1
	$(9y+b) = 9(2y-b) \Rightarrow y = \frac{10}{9}b$ Multiplies across and makes y the subject	M1 A1cso
		(4)
	Notes	
(i)	1 <sup>st</sup> M1: Applies power law of logarithms correctly to one side of the equation M1: Correct log work in correct order. If they square and obtain a quadratic the algebra should	be
	correct. The marks is for $x + a = \sqrt{16a^6}$ is ws allow $x + a = \pm 4a^3$ for Method mark. Also	o allow
	$x + a = 4a^4$ or $x + a = \pm 4a^{5.5}$ or even $x + a = 16a^3$ as there is evidence of attempted square	root.
	May see the correct $x + a = 10^{(\log 4 + 3\log a)}$ so $x = -a + 10^{(\log 4 + 3\log a)}$ which gains M1A0 unless	followed
	by the answer in the scheme.	
(ii)	A1: Do not allow $x = \pm 4a^3 - a$ for accuracy mark. You may see the factorised $a(2a + 1)(2a - M1)$ : Applying the subtraction or addition law of logarithms correctly to make <b>two</b> log <b>terms</b>	– 1) o.e.
(11)	into one log term in y	
	M1: Uses $\log_3 3^2 = 2$	
	$3^{rd}$ M1: Obtains <b>correct</b> linear equation in <i>y</i> usually the one in the scheme and attempts $y =$	
	A1cso: $y = \frac{10}{9}b$ or correct equivalent after <b>completely correct</b> work.	
	Special case:	
	$\frac{\log_3(9y+b)}{\log_3(2y-b)} = 2$ is M0 unless clearly crossed out and replaced by the correct $\log_3 \frac{(9y+b)}{(2y-b)}$	= 2
	Candidates may then write $\frac{(9y+b)}{(2y-b)} = 3^2$ and proceed to the <i>correct</i> answer – allow M0M1M	
	the answer requires a completely correct solution.

Accept 9/11 underlined or $k$ = 9/11 written on for vely ( $k$ - 11) may be seen in the factorisation and a statement 'k not integer' given with $k$ =9 arts (i) and (ii) together	
B1: $a = \frac{8}{11}$	or any equivalent (If not stated explicitly or used in formula may be implied by correct answ	ver to (ii))
B1:Substitut (i) M1: Us	es $k = 9/11$ completely and obtain $r = -4$ (If not stated explicitly, may be implied by correct e of correct formula with $n = 4$ a and/or r may still be in terms of k or uses $(2k+10) \times r$ . May precedent exact answer	t answer to (i) or (ii))

(ii) M1: Use of correct formula with n = 10 a and/or r may still be in terms of k May assume r = k A1 : -152520 cao

NB Correct formula **with negative sign** in numerator followed by the incorrect  $(8/11)(1+4^{10})/(1-(-4))$  usually found equal to 152520.2909 with no negative sign can be allowed M1A0 but if the incorrect numerical expression appears on its own with no formula then M0A0

Listing terms can get: B1 (first term) B1 M1A1 (implied by correct 4<sup>th</sup> term) M1A1 (implied by -152520)

Question Number	Scheme		Marks
<b>10.</b> (a)	$\frac{\mathrm{d}y}{\mathrm{d}x} = 12x^2 + 18x - 30$		M1
	d <i>x</i> Either	Or	
	Substitute $x = 1$ to give $\frac{dy}{dx} = 12 + 18 - 30 = 0$		A1
	So turning point (all correct work so far)	Deduce $x = 1$ from correct work	A1cso (3)
(b) Way 1	When $x = 1$ , $y = 4 + 9 - 30 - 8 = -25$		B1
	Area of triangle $ABP = \frac{1}{2} \times 1 \times 25 = 12.5$ (Where <i>P</i> is at (1, 0))		B1
	Way 1: $\int (4x^3 + 9x^2 - 30x - 8) dx = x^4 + \frac{9}{3}x^3 - \frac{30x^2}{2} - 8x \{+c\} \text{ or } x^4 + 3x^3 - 15x^2 - 8x \{+c\}$		M1A1
	$\left[x^{4} + 3x^{3} - 15x^{2} - 8x\right]_{-\frac{1}{4}}^{1} = (1 + 3 - 15 - 8) - \left(\left(-\frac{1}{4}\right)^{4} + 3\left(-\frac{1}{4}\right)^{3} - 15\left(-\frac{1}{4}\right)^{2} - 8\left(-\frac{1}{4}\right)\right)$		dM1
	$=(-19)-\frac{261}{256}$	or -19-1.02	
	So Area = " <i>their</i> 12.5" + " <i>their</i> 20 $\frac{5}{256}$ " or "1	$2.5^{\circ} + 20.02^{\circ}$ or $12.5^{\circ} + their \frac{5125}{256}$	ddM1
	= 32.52 (NOT - 32.52)		A1 (7)
	Less efficient alternative methods for first	two marks in part (b) with Way 1 or 2	[10]
	For first mark: Finding equation of the line A For second mark: Integrating to find triangle		B1
	$\int_{1}^{2} (25x - 50) dx = \left[\frac{25}{2}x^{2} - 50x\right]_{1}^{2} = -50 + 37.5 = -50$	-12.5 so area is 12.5	B1
	Then mark as before if they use Method in o	0	
(b) Way 2	Way 2: Those who use area for original cur between line and curve between 1 and 2 ha		
way 2	The first B1 (if $y=-25$ is not seen) is for equa		B1
	The second B1 may be implied by final answ shaped" region between line and curve, or by are	ver correct, or 4.5 seen for area of "segment	<b>B</b> 1
	$\int (4x^3 + 9x^2 - 55x + 42) dx = x^4 + \frac{9}{3}x^3 - \frac{55x^2}{2}$	$+42x \{+c\}$ (or integration as in Way 1)	M1A1
	The dM1 is for correct use of the different $co$		
	$\left[ \left[ x^4 + 3x^3 - 15x^2 - 8x \right]_{-\frac{1}{4}}^2 = (16 + 24 - 60 - 16) - \left( \left( -\frac{1}{4} \right)^4 + 3\left( -\frac{1}{4} \right)^3 - 15\left( -\frac{1}{4} \right)^2 - 8\left( -\frac{1}{4} \right) \right) \right]$		
	And $\left[x^4 + \frac{9}{3}x^3 - \frac{55x^2}{2} + 42x\right]_1^2 = 16 + 24 - 110 + 84 - (1 + 3 - 27.5 + 42)$		dM1
	So Area = their $\left[x^4 + 3x^3 - 15x^2 - 8x\right]_{-\frac{1}{4}}^2$ min	<b>nus their</b> $\left[x^4 + \frac{9}{3}x^3 - \frac{55x^2}{2} + 42x\right]_1^2$	ddM1
	i.e. " <i>their</i> 37.0195"– " <i>their</i> 4.5" (with both sets of limits correct for the integral)		
	Reaching = $32.52$ (NOT - $32.52$ )		
	See over for special case with wrong limits		

$ \int (4x^3 + 9x^2 - 55x + 42)dx = x^1 + \frac{9}{3}x^2 - \frac{55x^2}{2} + 42x \{+c\} $ (They will not earn any of the last 3 marks) They may also get first B1 mark for the correct equation of the straight line (usually seen but may be implied by correct line -curve equation) and second B1 if they also use limits 1 and 2 to obtain 4.5 (or find the triangle area 12.5). Notes (a) M1: Attempt at differentiation - all powers reduced by 1 with $8 \rightarrow 0$ . A1: the derivative must be correct and uses derivative = 0 to find x or substitutes $x = 1$ to give 0. Ignore any reference to the other root (-52) for this mark. A1 eso: obtains $x = 1$ from correct work, or deduces turning point (if substitution used – may be implied a preamble e.g. dy/dx =0 at T.P.) N.B. If their factorisation or their second root is incorrect then award A0cso. If however their factorisation/roots are correct, it is not necessary for them to comment that -2.5 is outsi the range given. (b) Way 1: B1: Obtains $y = -25$ when $x = 1$ (may be seen anywhere – even in (a)) or finds correct equation of line is $y = 25x - 50$ B1: Obtains $y = -25$ when $x = 1$ (may be seen anywhere). Allow -12.5. Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of their gave and $\frac{1}{4}$ and also 2 and 1 AND subtract (which is equivalent) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and -14 and subtracting. May use 2 and -1/4 and also 2 and 1 AND subtract (which is equivalent) dM1: (depends on both method marks) Correct method to obtain shaded area so adds two positive numbers (areas) together – one is area of riangle, the other is area of fragin of the use in $2.50 \text{ for there were obtained form integration of divite 2.5 us used and final correct answer obtained so award of final A1 result in the award of this B1. It may also be implied by correct integration of ubits? NB = 1. A1: the derivative must be correct and uses derivative = 0 to find x or substitutes $x = 1$ to give 0. Ignore any reference to the other root (-5/2) for this mark. A1cso: obtains $x = 1$ from correct work, or deduces turning point (if substitution used – may be implied a preamble e.g. $dy/dx = 0$ at T.P.) N.B. If their factorisation or their second root is incorrect then award A0cso. If however their factorisation/roots are correct, it is not necessary for them to comment that -2.5 is outsit the range given. Way 1: B1: Obtains $y = .25$ when $x = 1$ (may be seen anywhere – even in (a)) or finds correct equation of line is $y = 25x - 50$ B1: Obtains area of triangle = 12.5 (may be seen anywhere). Allow -12.5. Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of cubic; two correct terms for their integration. No limits needed A1: completely correct integral for the cubic ( <b>may be unsimplified</b> ) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and -1/4 and subtracting. May use 2 and -1/4 and also 2 and 1 AND subtract (which is equivalent) ddM1 (depends on both method marks) Correct method to obtain shaded area so adds two positive numbers (areas) together – one is area of triangle, the other is area of region obtained from integration of correct function with correct limits (may add two negatives then makes positive) Way 2: This is a long method and needs to be a correct method B1: Finds y=-25 at z=1, or correct equation of line is $y = 25x - 50$ B1: May be implied where WAY 2 is used and final correct answer obtained so award of final A1 result in the award of this B1. It may also be implied by correct integration of line equation (no limits needed). Two correct terms needed A1: Completely correct integral for their cubic (may be unsimplified) – may have wrong coefficients <i>x</i> and wrong constant term through errors in subtraction dM1: Use limits for original curve hetween -1/4 and 2 and use limits of 1 and 2 for area between l	(a)				
any reference to the other root (-5/2) for this mark. A less obtains $x = 1$ from correct work, or deduces turning point (if substitution used – may be implied a preamble e.g. $dy/dx = 0$ at T.P.) N.B. If their factorisation or their second root is incorrect then award A0cso. If however their factorisation/roots are correct, it is not necessary for them to comment that -2.5 is outsi the range given. Way 1: B1: Obtains $y = -25$ when $x = 1$ (may be seen anywhere – even in (a)) or finds correct equation of line is y = 25x - 50 B1: Obtains area of triangle = 12.5 (may be seen anywhere). Allow -12.5. Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of cubic; two correct terms for their integration. No limits needed A1: completely correct integral for the cubic (may be unsimplified) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and -1/4 and subtracting. May use 2 and -1/4 and also 2 and 1 AND subtract (which is equivalent) ddM1 (depends on both method marks) Correct method to obtain shaded area so adds two positive numbers (areas) together – one is area of triangle, the other is area of region obtained from integration of correct function with correct limits (may add two negatives then makes positive) Way 2: This is a long method and needs to be a correct method B1: Finds y=-25 at x=1, or correct equation of line is $y = 25x - 50$ B1: May be implied where WAY 2 is used and final correct answer obtained so award of final A1 result in the award of this B1. It may also be implied by correct integration of line equation (no limits needed). Two correct terms needed A1: Completely correct integral for their cubic (may be unsimplified) – may have wrong coefficients or a dwrong constant term through errors in subtraction dM1: Attempt at integration of given cubic or after attempt at subtracting their line equation (no limits needed). Two correct terms needed A1: Completely correct integral for their cubic (may be unsimplified	(u)		nore		
Al cso: obtains $x = 1$ from correct work, or deduces turning point (if substitution used – may be implied a preamble e.g. $dy/dx = 0$ at T.P.) <b>N.B.</b> If their factorisation or their second root is incorrect then award A0cso. If however their factorisation/roots are correct, it is not necessary for them to comment that $-2.5$ is outsi the range given. <b>Way 1:</b> B1: Obtains $y = -25$ when $x = 1$ (may be seen anywhere – even in (a)) or finds correct equation of line is y = 25x - 50 B1: Obtains area of triangle = 12.5 (may be seen anywhere). Allow $-12.5$ . Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of cubic; two correct terms for their integration. No limits needed A1: completely correct integral for the cubic (may be unsimplified) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and $-1/4$ and subtracting. May use 2 and $-1/4$ and also 2 and 1 <b>AND subtract</b> (which is equivalent) ddM1 (depends on both method marks) <b>Correct</b> method <b>to obtain shaded area</b> so <b>adds</b> two positive numbers (areas) together – one is area of triangle, the other is area of region obtained from integration of correct function with correct limits (may add two negatives then makes positive) <b>Way 2:</b> This is a long method and needs to be a correct method B1: Finds y= $-25$ at $x=1$ , or correct equation of line is $y = 25x - 50$ B1: May be implied where WAY 2 is used and final correct answer obtained so award of final A1 result in the award of this B1. It may also be implied by correct integration of cline equation or of curve minus line expression between limits 1 and 2. So if only slip is final subtraction (giving final A0, this mark may still be awarded). So may be implied by 4.5 seen for area of "segment shaped" region between line and curve. M1: Attempt at integration of given cubic or after attempt at subtracting their line equation (no limits needed). Two correct terms needed A1: Completely correct line fract wherewen $-1/4$ and 2 and use limits of 1 and 2 for a					
<b>N.B.</b> If their factorisation or their second root is incorrect then award A0cso. If however their factorisation/roots are correct, it is not necessary for them to comment that $-2.5$ is outsi the range given. <b>Way 1:</b> B1: Obtains $y = -25$ when $x = 1$ (may be seen anywhere – even in (a)) or finds correct equation of line is y = 25x - 50 B1: Obtains area of triangle = 12.5 (may be seen anywhere). Allow $-12.5$ . Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of cubic; two correct terms for their integration. No limits needed A1: completely correct integral for the cubic ( <b>may be unsimplified</b> ) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and $-1/4$ and subtracting. May use 2 and $-1/4$ and also 2 and 1 <b>AND subtract</b> (which is equivalent) ddM1 (depends on both method marks) <b>Correct</b> method to <b>obtain shaded area</b> so <b>adds</b> two positive numbers (areas) together – one is area of triangle, the other is area of region obtained from integration of correct function with correct limits (may add two negatives then makes positive) <b>Way 2:</b> This is a long method and needs to be a correct method B1: Finds $y=-25$ at $x=1$ , or correct equation of line is $y = 25x - 50$ B1: May be implied where WAY 2 is used and final correct answer obtained so award of final A1 result in the award of this B1. It may also be implied by correct integration of line equation or of curve minus line expression between limits 1 and 2. So if only slip is final subtracting (heir line equation (no limits needed). Two correct terms needed A1: Completely correct integral for their cubic (may be unsimplified) – may have wrong coefficients $x$ and wrong constant term through errors in subtraction dM1: Use limits for original curve between $-1/4$ and 2 and use limits of 1 and 2 for area between lim and curve. A1: 32.52 or awrt 32.52 e.g. $32\frac{133}{256}$ NB: This correct answer implies the second B mark (Trapezium rule gets no marks after first two B marks					
If however their factorisation/roots are correct, it is not necessary for them to comment that $-2.5$ is outsi the range given. <b>Way 1:</b> B1: Obtains y = -25 when x = 1 (may be seen anywhere – even in (a)) or finds correct equation of line is y = 25x - 50 B1: Obtains area of triangle = 12.5 (may be seen anywhere). Allow -12.5. Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of cubic; two correct terms for their integration. No limits needed A1: completely correct integral for the cubic ( <b>may be unsimplified</b> ) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and -1/4 and subtracting. May use 2 and -1/4 and also 2 and 1 <b>AND subtract</b> (which is equivalent) dMM1 (depends on both method marks) <b>Correct</b> method <b>to obtain shaded area</b> so <b>adds</b> two positive numbers (areas) together – one is area of triangle, the other is area of region obtained from integration of correct function with correct limits (may add two negatives then makes positive) <b>Way 2:</b> This is a long method and needs to be a correct method B1: Finds $y=-25$ at $x=1$ , or correct equation of line is $y = 25x - 50$ B1: May be implied where WAY 2 is used and final correct answer obtained so award of final A1 result in the award of this B1. It may also be implied by correct integration (giving final A0, this mark may still be awarded). So may be implied by 4.5 seen for area of "segment shaped" region between line and curve. M1: Attempt at integration of given cubic or after attempt at subtracting their line equation (no limits needed). Two correct terms through errors in subtraction dM1: Use limits for original curve between -1/4 and 2 and use limits of 1 and 2 for area between lin and curve- needs completely correct integral for their stores there-this is dependent on two integrations ddM1: (depends on both method marks). Subtracts " <i>their</i> 37.0195" – " <i>their</i> 4.5" Needs consistency signs. A1: 32.52 or awrt 32.52 e.g. $32\frac{133}{256}$ NB: This correct answer impl					
(b) <b>Way 1:</b> B1: Obtains $y = -25$ when $x = 1$ (may be seen anywhere – even in (a)) or finds correct equation of line is $y = 25x - 50$ B1: Obtains area of triangle = 12.5 (may be seen anywhere). Allow –12.5. Accept $\frac{1}{2} \times 1 \times 25$ M1: Attempt at integration of cubic; two correct terms for their integration. No limits needed A1: completely correct integral for the cubic (may be unsimplified) dM1: We are looking for the start of a correct method here (dependent on previous M). It is for substituting 1 and -1/4 and subtracting.
