GCE Core Mathematics C2 (6664) Paper 1

Edexcel Limited. Registered in England and Wales No. 4496750 Registered Office: One90 High Holborn, London WC1V 7BH

Edexcel is one of the leading examining and awarding bodies in the UK and throughout the world. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers.

Through a network of UK and overseas offices, Edexcel's centres receive the support they need to help them deliver their education and training programmes to learners.

For further information, please call our GCE line on 0844 576 0025, our GCSE team on 0844 576 0027, or visit our website at www.edexcel.com.

If you have any subject specific questions about the content of this Mark Scheme that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

General Instructions for Marking

- 1. The total number of marks for the paper is 75.
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
 - M marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
 - A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
 - B marks are unconditional accuracy marks (independent of M marks)
 - Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- dep dependent
- indep independent
- dp decimal places
- sf significant figures
- ***** The answer is printed on the paper
- The second mark is dependent on gaining the first mark

Question Number	Scheme	Marks
1. (a)	$f(x) = x^4 + x^3 + 2x^2 + ax + b$	
	Attempting $f(1)$ or $f(-1)$.	M1
	$f(1) = 1 + 1 + 2 + a + b = 7$ or $4 + a + b = 7 \implies a + b = 3$ (as required) AG	A1 * cso (2)
(b)	Attempting $f(-2)$ or $f(2)$.	M1
	$f(-2) = \underline{16 - 8 + 8 - 2a + b} = -8 \{ \Rightarrow -2a + b = -24 \}$	A1
	Solving both equations simultaneously to get as far as $a =$ or $b =$	dM1
	Any one of $a = 9$ or $b = -6$	A1
	Both $a = 9$ and $b = -6$	A1 cso
		(5) [7]
	Notes	
(a)	M1 for attempting either $f(1)$ or $f(-1)$. A1 for applying $f(1)$, setting the result equal to 7, and manipulating this correctly to give the result given on the paper as $a + b = 3$. Note that the answer is given in part (a).	
(b)	M1: attempting either $f(-2)$ or $f(2)$. A1: <u>correct underlined equation</u> in <i>a</i> and <i>b</i> ; eg $16-8+8-2a+b=-8$ or equivalet eg $-2a + b = -24$. dM1: an attempt to eliminate one variable from 2 linear simultaneous equations in Note that this mark is dependent upon the award of the first method mark. A1: any one of $a = 9$ or $b = -6$. A1: both $a = 9$ and $b = -6$ and a correct solution only.	
	Alternative Method of Long Division: (a) M1 for long division by $(x - 1)$ to give a remainder in <i>a</i> and <i>b</i> which is independent A1 for {Remainder =} $b + a + 4 = 7$ leading to the correct result of $a + b = 3$ (answer (b) M1 for long division by $(x + 2)$ to give a remainder in <i>a</i> and <i>b</i> which is independent A1 for {Remainder =} $b - 2(a - 8) = -8$ { $\Rightarrow -2a + b = -24$ }. Then dM1A1A1 are applied in the same way as before.	er given.)

		(3) [6]
	Notes	[V]
(a)	M1 is also scored for $8^2 = 7^2 + 11^2 - (2 \times 7 \times 11 \cos C)$ or $7^2 = 8^2 + 11^2 - (2 \times 8 \times 11 \cos C)$	$\cos C$)
	or $\cos C = \frac{7^2 + 11^2 - 8^2}{2 \times 7 \times 11}$ or $\cos C = \frac{8^2 + 11^2 - 7^2}{2 \times 8 \times 11}$	
	1 st A1: Rearranged correctly to make $\cos C = \dots$ and numerically correct (possibly	
	unsimplified). Award A1 for any of $\cos C = \frac{8^2 + 7^2 - 11^2}{2 \times 8 \times 7}$ or $\cos C = \frac{-8}{112}$ or $\cos C$	$C = -\frac{1}{14}$ or
	$\cos C = \operatorname{awrt} - 0.071.$	
	SC: Also allow $1^{st} A1$ for $112 \cos C = -8$ or equivalent.	
	Also note that the 1 st A1 can be implied for \hat{C} = awrt 1.64 or \hat{C} = awrt 94.1°.	
	Special Case: $\cos C = \frac{1}{14}$ or $\cos C = \frac{11^2 - 8^2 - 7^2}{2 \times 8 \times 7}$ scores a SC: M1A0A0.	
	2^{nd} A1: for awrt 1.64 cao	
	Note that $A = 0.6876^{\circ}$ (or 39.401°), $B = 0.8116^{\circ}$ (or 46.503°)	
(b)	M1: alternative methods must be fully correct to score the M1. For any (or both) of the M1 or the 1^{st} A1; their <i>C</i> can either be in degrees or radians	
	Candidates who use $\cos C = \frac{1}{14}$ to give $C = 1.499$, can achieve the correct answer of	of awrt
	27.9 in part (b). These candidates will score M1A1A0cso, in part (b). Finding $C = 1.499$ in part (a) and achieving awrt 27.9 with no working scores M1A	A1A0.
	Otherwise with no working in part (b), awrt 27.9 scores M1A1A1. Special Case: If the candidate gives awrt 27.9 from any of the below then awar	:d

Aliter 10 (a) Way3	$\begin{cases} u = 4x \qquad v = 25 - 10x + x^2 \\ \frac{du}{dx} = 4 \qquad \qquad \frac{dv}{dx} = -10 + 2x \end{cases}$		
	\pm (their u')(their(5 - x) ²) \pm (4 x)(their v')	M1	
	$\frac{dy}{dx} = 4(25-10x + x^2) + 4x(-10 + 2x)$ A correct attempt at differentiating any one of either <i>u</i> or their <i>v</i> correctly.	dM1	
	Both $\frac{du}{dx}$ and $\frac{dv}{dx}$ correct		
	$\frac{\mathrm{d}V}{\mathrm{d}x} = 100 - 80x + 12x^2 \qquad 100 - 80x + 12x^2$	A1
