General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

1 (e)	<p>A01 (1), A02 (1), A03 (4), A04 (6)</p> <p><u>For Keeping 50% mark up</u></p> <ul style="list-style-type: none"> • Need to maintain profit margin, cannot keep same selling price for ever. • Customers may be quite willing to pay the higher price. The market may be able to carry this level of mark-up. • New price may still be below that of rival firms. • The increase in costs is £0.35, so this would mean an increase of £0.52 pence in the sales price. The selling price would rise from £22.35 to £22.87. Would customers notice this increase? • Profit would rise to £7.62 per item from £7.45 per item. <p><u>Against</u></p> <ul style="list-style-type: none"> • Passing on the increase in production cost. • Could absorb rising costs by increasing efficiency. Some areas are becoming more efficient - there seems to have been some reduction in costs in overheads. • Customers could be unhappy and go to a rival supplier. The market may be very competitive. • New price could price make firm's price higher than rivals. • The increase in costs is £0.35, so this would mean an increase of £0.52 pence in the sales price to £22.87. Would customers find this too much? • Some of the increased costs were because of the problems with the electricity supply – is it fair that customers should carry the burden of this problem? • The cutting department has been awarded a 5% wage rise but not the sewing department. This might cause dissent and a claim for a higher wage by sewing staff, thus leading to a rise in labour wages. <p><u>Decision</u></p> <p>Candidates may argue for or against continuation of a mark-up of 50%. The decision should be supported by reference to key points of their argument.</p>	(12)

2 (f)	<p>AO1(1), AO2 (1), AO3 (4), AO4 (6) Possible answers could include:</p> <p>Goodwill is the difference between the value of a business as a whole, and the fair value of its net assets. The value of the business could be said to be the price that a buyer agrees to pay for the business. The fair value of the business is agreed after the possible revaluation of assets and liabilities.</p> <p>The correct treatment of the goodwill paid, or purchased, would be to amortize the goodwill over its useful economic life.</p> <p><u>For this treatment</u> The buyer is likely to derive benefits from the expenditure over a number of years, so spreading the cost of this expenditure over a number of years agrees with the matching concept and gives a true and fair view of the accounts. This treatment is in line with recommended practice. i.e. FRS102 / IAS 38</p> <p>To write the goodwill off immediately may make profit unrealistically low, and the tax charge on profits would be unfairly low.</p> <p><u>Case against this treatment</u> If goodwill were to be written off immediately against reserves, the prudence concept is followed. It is difficult to estimate the number of years the buyer will benefit from the purchase of the business assets. Thus, the annual amortisation charge in the accounts may be unrealistic.</p> <p><u>Decision</u> Writing off over a number of years is recommended and beneficial as it gives a true and fair view of the accounts. The decision should be supported by reference to key points of their argument.</p>	(12)

	0	A completely incorrect response.
Level 1	1 - 3	Isolated elements of knowledge and understanding which are recall based. Weak or no relevant application to the scenario set. Generic assertions may be present.
Level 2	4 - 6	Elements of knowledge and understanding, which may be applied to the scenario. Chains of reasoning are present, but may be incomplete or invalid. A generic or superficial assessment is present.
Level 3	7 - 9	Accurate and thorough understanding, supported by relevant application to the scenario. Some analytical perspectives are present, with developed chains of reasoning, showing causes and/or effects. An attempt at an assessment is presented, using financial and maybe non-financial information, in an appropriate format and communicates reasoned explanations.
Level 4	10 - 12	Accurate and thorough knowledge and understanding, supported throughout by relevant application to the scenario. A coherent and logical chain of reasoning, showing causes and effects. Assessment is balanced, wide ranging and well contextualised using financial and maybe non-financial information and makes an informed decision(s).

Level 1	1-2	Isolated elements of knowledge and understanding that are recall based. Generic assertions may be present. Weak or no relevant application to the scenario set.
Level 2	3-4	Elements of knowledge and understanding, which are applied to the scenario. Some analysis is present, with developed chains of reasoning, showing causes and/or effects applied to the scenario, although these may be incomplete or invalid. An attempt at an evaluation is presented, using financial and perhaps non-financial information, with a decision.
Level 3	5-6	Accurate and thorough knowledge and understanding. Application to the scenario is relevant and effective. A coherent and logical chain of reasoning, showing causes and effects is present. Evaluation is balanced and wide-ranging, using financial and perhaps non-financial information and an appropriate decision is made.
