Question 1 continued

Lined area for writing the answer to Question 1.

(Total 6 marks)

Q1

Figure 1

A particle of weight 8 N is attached at  $C$  to the ends of two light inextensible strings  $AC$  and  $BC$ . The other ends,  $A$  and  $B$ , are attached to a fixed horizontal ceiling. The particle hangs at rest in equilibrium, with the strings in a vertical plane. The string  $AC$  is inclined at  $35^\circ$  to the horizontal and the string  $BC$  is inclined at  $25^\circ$  to the horizontal, as shown in Figure 1. Find

- (i) the tension in the string  $AC$ ,
- (ii) the tension in the string  $BC$ .

3.

Figure 2

A fixed rough plane is inclined at  $30^\circ$  to the horizontal. A small smooth pulley  $P$  is fixed at the top of the plane. Two particles  $A$  and  $B$ , of mass  $2\text{ kg}$  and  $4\text{ kg}$  respectively, are attached to the ends of a light inextensible string which passes over the pulley  $P$ . The part of the string from  $A$  to  $P$  is parallel to a line of greatest slope of the plane and  $B$  hangs freely below  $P$ , as shown in Figure 2. The coefficient of friction between  $A$  and the plane is  $\frac{1}{\sqrt{3}}$ . Initially  $A$  is held at rest on the plane. The particles are released from rest with the string taut and  $A$  moves up the plane.

Find the tension in the string immediately after the particles are released.

4. At time  $t = 0$ , two balls  $A$  and  $B$  are projected vertically upwards. The ball  $A$  is projected vertically upwards with speed  $2 \text{ m s}^{-1}$  from a point  $50 \text{ m}$  above the horizontal ground. The ball  $B$  is projected vertically upwards from the ground with speed  $20 \text{ m s}^{-1}$ . At time  $t = T$  seconds, the two balls are at the same vertical height,  $h$  metres, above the ground. The balls are modelled as particles moving freely under gravity. Find

(a) the value of  $T$ , (5)

(b) the value of  $h$ . (2)

5.

Figure 3

A particle  $P$  of mass  $0.6 \text{ kg}$  slides with constant acceleration down a line of greatest slope of a rough plane, which is inclined at  $25^\circ$  to the horizontal. The particle passes through two points  $A$  and  $B$ , where  $AB = 10 \text{ m}$ , as shown in Figure 3. The speed of  $P$  at  $A$  is  $2 \text{ m s}^{-1}$ . The particle  $P$  takes  $3.5 \text{ s}$  to move from  $A$  to  $B$ . Find

- (a) the speed of  $P$  at  $B$ , (3)
- (b) the acceleration of  $P$ , (2)
- (c) the coefficient of friction between  $P$  and the plane. (5)

7.

Figure 4

A truck of mass 1750 kg is towing a car of mass 750 kg along a straight horizontal road. The two vehicles are joined by a light towbar which is inclined at an angle  $\theta$  to the road, as shown in Figure 4. The vehicles are travelling at  $20 \text{ m s}^{-1}$  as they enter a zone where the speed limit is  $14 \text{ m s}^{-1}$ . The truck's brakes are applied to give a constant braking force on the truck. The distance travelled between the instant when the brakes are applied and the instant when the speed of each vehicle is  $14 \text{ m s}^{-1}$  is 100 m.

(a) Find the deceleration of the truck and the car. (3)

The constant braking force on the truck has magnitude  $R$  newtons. The truck and the car also experience constant resistances to motion of 500 N and 300 N respectively. Given that  $\cos \theta = 0.9$ , find

(b) the force in the towbar, (4)

(c) the value of  $R$ . (4)

Question 7 continued

Lined area for student response.

8.

Figure 5

A uniform rod  $AB$  has length 2 m and mass 50 kg. The rod is in equilibrium in a horizontal position, resting on two smooth supports at  $C$  and  $D$ , where  $AC = 0.2$  metres and  $DB = x$  metres, as shown in Figure 5. Given that the magnitude of the reaction on the rod at  $D$  is twice the magnitude of the reaction on the rod at  $C$ ,

(a) find the value of  $x$ .

(6)

The support at  $D$  is now moved to the point  $E$  on the rod, where  $EB = 0.4$  metres. A particle of mass  $m$  kg is placed on the rod at  $B$ , and the rod remains in equilibrium in a horizontal position. Given that the magnitude of the reaction on the rod at  $E$  is four times the magnitude of the reaction on the rod at  $C$ ,

(b) find the value of  $m$ .
