Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Past Paper (Mark Scheme)

WMA01

PEARSON EDEXCEL IAL MATHEMATICS

General Instructions for Marking

- 1. The total number of marks for the paper is 125
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- M marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.

3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol $\sqrt{}$ will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- * The answer is printed on the paper or ag- answer given
- L or d... The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

Winter 2017

Mathematics C12

Past Paper (Mark Scheme)

This resource was created and owned by Pearson Edexcel

- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
 - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
 - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

WMA01

General Principles for Core Mathematics Marking

(But note that specific mark schemes may sometimes override these general principles).

Method mark for solving 3 term quadratic:

1. Factorisation

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where $|pq| = |c|$, leading to $x = \dots$
 $(ax^2 + bx + c) = (mx + p)(nx + q)$, where $|pq| = |c|$ and $|mn| = |a|$, leading to $x = \dots$

2. Formula

Attempt to use the <u>correct</u> formula (with values for a, b and c).

3. Completing the square

Solving
$$x^2 + bx + c = 0$$
: $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$, $q \neq 0$, leading to $x = \dots$

Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by 1. $(x^n \rightarrow x^{n-1})$

2. Integration

Power of at least one term increased by 1. $(x^n \rightarrow x^{n+1})$

Use of a formula

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are mistakes in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

Exact answers

Examiners' reports have emphasised that where, for example, an <u>exact</u> answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

Answers without working

The rubric says that these <u>may</u> not gain full credit. Individual mark schemes will give details of what happens in particular cases. General policy is that if it could be done "in your head", detailed working would not be required. Most candidates do show working, but there are occasional awkward cases and if the mark scheme does <u>not</u> cover this, please contact your team leader for advice.

Question Number		Scheme	Marks
1(a)	$\left(\frac{\mathrm{d}y}{\mathrm{d}x} = \right)\frac{3x^2}{3} - 2 \times 2x + 3$	M1: $x^n \rightarrow x^{n-1}$ or $5 \rightarrow 0$ A1: Any 3 of the 4 terms differentiated correctly - this could be 2 terms correct and $5 \rightarrow 0$ (allow simplified or un-simplified for this mark, including $3x^0$ for 3)	M1A1
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = x^2 - 4x + 3$	Cao. All 3 terms correct and simplified and on the same line and no + 0. (Do not allow $1x^2$ for x^2 or x^1 for x or $3x^0$ for 3). Condone poor notation e.g. omission of $dy/dx = \dots$ or if they use $y = \dots$	A1
		tiply by 3 before differentiating:	
	e.g. $\left(\frac{x^3}{3} - 2x^2 + 3x + 5\right) \times 3 =$	$= x^3 - 6x^2 + 9x + 15 \Rightarrow \frac{dy}{dx} = 3x^2 - 12x + 9$	
	Scores M1A0A0 but could recover in (a) if they then divide by 3		
	If they persist with $\frac{dy}{dx} = 3x^2 - 12x + 9$ in (b), allow full recovery in (b)		
	dx		(3)
(b)	$x^2 - 4x + 3 = 0 \Rightarrow x = 1, 3$	M1: Attempt to solve their 3TQ from part (a) as far as $x =$ (see general guidance for solving a 3TQ). If no working is shown and the roots are incorrect for their 3TQ, score M0 here but the second method mark below is still available. A1: Correct values (may be implied by their inequalities e.g. a correct quadratic followed by just $x > 1$ and $x > 3$ could score M1A1 here)	M1A1
	Chooses outside region $x < "1", x > "3"$ $\begin{cases} x < \text{their lower limit } x > \text{their upper limit}. Do not award simply for diagram or table.} \end{cases}$		M1
	x < 1, x > 3 Correct answer. Allow the correct regions separated by a comma or written separately and allow other notation e.g. $(-\infty,1) \cup (3,\infty)$. Do not allow $1 > x > 3$ or $x < 1$ and $x > 3$ (These score M1A0). ISW if possible e.g. $x > 3$, $x < 1$ followed by $1 > x > 3$ can score M1A1. $x > 3$, $x > 1$ followed by $x > 3$ (or) $x < 1$ can score M1A1. Fully correct answer with no working scores both marks. Answers that are otherwise correct but use \le , \ge lose final mark as would $[-\infty,1] \cup [3,\infty]$.		A1
			(4)
			(7 marks)

Winter 2017 www.mystudybro.com Mathematics C12

Question	ter 2017				ematics (
Attempts to complete the square on x and y or sight of $(x\pm 4)$ and $(y\pm 2)$. May be implied by a centre of $(\pm 4, \pm 2)$. Or if considering $x^2+y^2+2gx+2fy+c=0$, centre is $(\pm g,\pm f)$. Centre $C=(4,-2)$ Correct centre (allow $x=4,y=-2$) But not $g=,f=$ or $p=,q=$ etc. Correct answer scores both marks (b) $ \begin{array}{c} \mathbf{Must reach:} \\ r^2=12+\text{their } (\pm 4)^2+\text{their } (\pm 2)^2 \\ \text{or } \\ r=\sqrt{12}+\text{their } (\pm 4)^2+\text{their } (\pm 2)^2 \\ \text{or } \\ \text{or } \\ r=\sqrt{12}+\text{their } (\pm 4)^2+\text{their } (\pm 2)^2 \\ \text{or } \\ \text{or } \\ r=\sqrt{g^2+f^2-c} \\ \text{Must clearly be identifying the radius or radius}^2 \\ \text{May be implied by a correct exact radius or awrt 5.66} \\ r=\sqrt{32}. \text{ Accept exact equivalents} \\ \text{such as } 4\sqrt{2}\cdot r= \text{ not needed but must clearly be the radius. 12(a)	$y = \frac{3}{4}x^2 - 4\sqrt{x} + 7 \Rightarrow \frac{dy}{dx} = \frac{3}{2}x - 2x^{-0.5}$	M1: Differentiates to obtain at least one correct power for one of the terms in x . (may be un-simplified) e.g. $x^2 \rightarrow x^{2-1}$ or $\sqrt{x} \rightarrow x^{\frac{1}{2}-1}$ A1: Correct derivative. Allow unsimplified e.g. $2 \times \frac{3}{4} x^{2-1}$ or $-4 \times \frac{1}{2} x^{\frac{1}{2}-1}$	M1A1
	At $x = 4$ $\frac{dy}{dx} = \frac{3}{2}(4) - 2(4)^{-0.5} =$	Substitutes $x = 4$ into a changed function in an attempt to find the gradient.	M1
	$y-11 = "5"(x-4)$ or $y = mx+c \Rightarrow 11 = "5" \times 4 + c \Rightarrow c = \dots$	Correct straight line method using $(4, 11)$ correctly placed and their dy/dx at $x = 4$ for the tangent not the normal . If using $y = mx + c$, must reach as far as finding a value for c . Dependent on the previous M.	d M1
	y = 5x - 9	Correct printed equation with no errors seen. Beware of the "5" appearing from wrong working.	A1*
Important Note: Following a correct derivative, if candidate states $x = 4$ so $dy/dx = 5$, to is fine if they then complete correctly — allow full marks. However, following a correct derivative, if the candidate just states $dy/dx = 5$ and then proceeds to obtain the correct straight line equation the final mark can be withheld. Some evidence is needed that the		adidate states $x = 4$ so $dy/dx = 5$, this correctly – allow full marks. vative, if the candidate <u>just</u> states in the correct straight line equation,	
	omarawo is completeling	2 2	
Ĺ			<u> </u>

Past Paper (Mark Scheme) This resource was created and owned by Pearson Edexcel WMA01 Question Scheme Marks Number 13(a)(i) $(0,c^2)$ (c, 0)(-c, 0)shape anywhere but not The maximum must be smooth and not form a point and the branches must not clearly turn back in on themselves. В1 A continuous graph passing through or touching at the points (-c, 0), (c, 0) and $(0, c^2)$. They can appear on their sketch or within the body of the script but there must be a sketch. Allow these marked as -c, c and c^2 in the correct places. Allow (0, -c), (0, c) and $(c^2, 0)$ as long as they are marked in the correct places. If there is any ambiguity, the sketch takes precedence. A fully correct diagram with the curve in the correct position and the intercepts and shape as described above. The maximum must be on the y-axis **B**1 and the branches must extend below the *x*-axis. (a)(ii) There must be a sketch to score any marks in (a) Shape. A positive cubic with only one maximum and one minimum. The **B**1 curve must be smooth at the maximum and at the minimum (not pointed). A smooth curve that touches or meets the x-axis at the origin and (3c,0) in the correct place and no other intersections. The origin does not need to be marked but the (3c,0) does. Allow 3c or (0,3c) to be **B**1 (3c, 0)marked in the correct place. May appear on their sketch or within the body of the script. If there is any ambiguity, the sketch takes precedence. Maximum at the origin (allow the **B**1 maximum to form a point or cusp) There must be a sketch to score any marks in (a) **(5)** Intersect when $x^{2}(x-3c) = c^{2} - x^{2} \Rightarrow x^{3} - 3cx^{2} = c^{2} - x^{2}$ **(b)** M1 Sets equations equal to each other and attempts to multiply out the bracket or vice versa Collects to one side (may be implied), factorises the x^2 terms and obtains printed answer with no errors. There must be an $x^3 + x^2 - 3cx^2 - c^2 = 0$ intermediate line of working. A1* $\Rightarrow x^3 + (1-3c)x^2 - c^2 = 0*$ **Allow** $x^3 + x^2(1-3c) - c^2 = 0$ or $0 = x^3 + (1 - 3c)x^2 - c^2$ or $0 = x^3 + x^2(1 - 3c) - c^2$ **(2)**
