Instructions to Candidates

In the boxes above, write your centre number, candidate number, your surname, initial(s) and signature. Check that you have the correct question paper.

You must write your answer for each question in the space following the question.

When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information for Candidates

A booklet 'Mathematical Formulae and Statistical Tables' is provided.

Full marks may be obtained for answers to ALL questions.

The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2).

There are 8 questions in this question paper. The total mark for this paper is 75.

There are 24 pages in this question paper. Any blank pages are indicated.

Advice to Candidates

You must ensure that your answers to parts of questions are clearly labelled.

You should show sufficient working to make your methods clear to the Examiner.

Answers without working may not gain full credit.

Notes: (a) Answer $x = 2$ with no working or no incorrect working seen: M1A1

Note: $x = 2$ from $\ln x = \frac{\ln 6}{\ln 3} = \ln 2$ M0A0

$\ln x = \ln 6 - \ln 3 \Rightarrow x = e^{(\ln 6 - \ln 3)}$ allow M1, $x = 2$ (no wrong working) A1

- (b) 1st M1 for attempting to multiply through by e^x : Allow y, X , even x , for e^x
 2nd M1 is for solving quadratic as far as getting two values for e^x or y or X etc
 3rd M1 is for converting their answer(s) of the form $e^x = k$ to $x = \ln k$ (must be exact)
 A1 is for $\ln 3$ **and** $\ln 1$ or 0 (Both required and no further solutions)

Notes: (a) M for attempt at $f(x)g'(x) + f'(x)g(x)$

1st A1 for one correct, 2nd A1 for the other correct.

Note that x^2e^x on its own scores no marks

(b) 1st A1 ($x = 0$) may be omitted, but for

2nd A1 both sets of coordinates needed ; f.t only on candidate's $x = -2$

(c) M1 requires complete method for candidate's (a), result may be unsimplified for A1

(d) A1 is cso; $x = 0$, min, and $x = -2$, max and no incorrect working seen,

or (in alternative) sign of $\frac{dy}{dx}$ either side correct, or values of y appropriate to t.p.

Need only consider the quadratic, as may assume $e^x > 0$.

If all marks gained in (a) and (c), and correct x values, give M1A1 for correct statements with no working

N.B. $R \cos \alpha = 2$, $R \sin \alpha = 3$ used, can still score M1A1 for R , but loses the A mark for α .

$\cos \alpha = 3$, $\sin \alpha = 2$: apply the same marking.

(b) M1 for realising $\sin(x + \alpha) = \pm 1$, so finding R^4 .

(c) Working in mixed degrees/rads : first two marks available

Working consistently in degrees: Possible to score first 4 marks

Notes: (b) (main scheme) M1 is for $(10 + 10e^{-\frac{5}{8}})e^{-\frac{1}{8}}$, or $\{10 + \text{their(a)}\}e^{-\frac{1}{8}}$

N.B. The answer is given. There are many correct answers seen which deserve M0A0
or M1A0

(c) 1st M is for $(10 + 10e^{-\frac{5}{8}})e^{-\frac{T}{8}} = 3$ o.e.

2nd M is for converting $e^{-\frac{T}{8}} = k$ ($k > 0$) to $-\frac{T}{8} = \ln k$. This is independent of 1st M.

Trial and improvement: M1 as scheme,
M1 correct process for their equation (two equal to 3 s.f.)
A1 as scheme
