Friday 13 January 2012 – Morning

Time: 1 hour 30 minutes

Materials required for examination<br/>Mathematical Formulae (Pink)Items included with question papers<br/>Nil

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation or symbolic differentiation/integration, or have retrievable mathematical formulae stored in them.

#### **Instructions to Candidates**

In the boxes above, write your centre number, candidate number, your surname, initials and signature. Check that you have the correct question paper.

Answer ALL the questions.

You must write your answer for each question in the space following the question.

When a calculator is used, the answer should be given to an appropriate degree of accuracy.

### **Information for Candidates**

A booklet 'Mathematical Formulae and Statistical Tables' is provided.

Full marks may be obtained for answers to ALL questions.

The marks for individual questions and the parts of questions are shown in round brackets: e.g. (2).

There are 9 questions in this question paper. The total mark for this paper is 75.

There are 28 pages in this question paper. Any blank pages are indicated.

#### **Advice to Candidates**

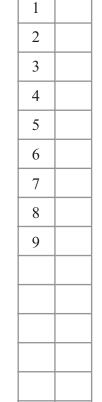

You must ensure that your answers to parts of questions are clearly labelled. You should show sufficient working to make your methods clear to the Examiner. Answers without working may not gain full credit.

This publication may be reproduced only in accordance with Pearson Education Ltd copyright policy.

	x = 55  or  175	A1	
	x = 55, 135, 175	A1	(6)
Notes	M1 Correct order of operation: inverse sine then linear algebra - not just $3x$ -15 = 30 (slips in linear algebra lose Accuracy mark) A1 Obtains first solution 15 M1 Uses either $180 - \alpha$ or $540 - \alpha$ , M1 uses all three $180 - \alpha$ and $360 + \alpha$ and $540 - \alpha$ A1, for one further correct solution 55 or 175, (depends only on second M1) A1 – all 3 further correct solutions If more than 4 solutions in range, lose last A1 Common slips: Just obtains 15 and 55, or 15 and 175 – usually M1A1M1M0A1A0 Just obtains 15 and 135 is usually M1A1M0M0A0A0 (It is easy to get this erroneously) Obtains 5, 45, 125 and 165 – usually M1A0M1M1A0A0 Obtains 25, 65, 145, (185) usually M1A0M1M1A0A0 Working in radians – lose last A1 earned for $\frac{\pi}{12}$ , $\frac{11\pi}{36}$ , $\frac{3\pi}{4}$ and $\frac{35\pi}{36}$ or numerical equivalents Mixed radians and degrees is usually Method marks only Methods involving no working should be sent to Review		
9 (ii)	At least one of $(\frac{a\pi}{10} - b) = 0$ (or $n\pi$ ) $(\frac{a3\pi}{5} - b) = \pi$ {or $(n+1)\pi$ } or in degrees or $(\frac{a11\pi}{10} - b) = 2\pi$ {or $(n+2)\pi$ } If two of <b>above equations</b> used eliminates $a$ or $b$ to find one or both of these	M1	
	or uses period property of curve to find $a$ or uses other valid method to find either $a$ or $b$ (May see $\frac{5\pi}{10}a = \pi$ so $a = 0$ )	M1	
	Obtains $a = 2$	A1	
	Obtains $b = \frac{\pi}{5}$ (must be in radians)	A1	(4)

Notes	M1: Award for $(\frac{a\pi}{10} - b) = 0$ or $\frac{a\pi}{10} = b$ BUT $\sin(\frac{a\pi}{10} - b) = 0$ is M0
	M1: As described above but solving $(\frac{a\pi}{10} - b) = 0$ with $(\frac{a3\pi}{5} - b) = 0$ is M0 (It gives $a = b = 0$ )
	Special cases:
	Can obtain full marks here for both correct answers with no working M1M1A1A1
	For $a = 2$ only, with no working, award M0M1A1A0 For $b = \frac{\pi}{5}$ only with no working
	M1M0A0A1
Alternative	Some use translations and stretches to give answers.
	If they achieve $a=2$ they earn second method and first accuracy. If they achieve correct value for $b$
	they earn first method and second accuracy.
	Common error is $a=2$ and $b=\frac{\pi}{10}$ . This is usually M0M1A1A0 unless they have stated
	$\left(\frac{a\pi}{10} - b\right) = 0$ earlier in which case they earn first M1.
