Write your name here Surname Other names Centre Number Candidate Number Pearson **Edexcel GCE Further Pure Mathematics FP2 Advanced/Advanced Subsidiary** Paper Reference Wednesday 7 June 2017 – Morning 6668/01 Time: 1 hour 30 minutes You must have: **Total Marks** Mathematical Formulae and Statistical Tables (Pink)

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
 there may be more space than you need.
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for each question are shown in brackets
 use this as a quide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ▶

7.	$\cos x \frac{\mathrm{d}y}{\mathrm{d}x} + y \sin x$	$x = 2\cos^3 x \sin x + 1$	
(a)	$\frac{\mathrm{d}y}{\mathrm{d}x} + y \tan x = 2\cos^2 x \sin x + \frac{1}{\cos x}$	Divides by cos <i>x</i> LHS both terms divided RHS min 1 term divided	M1
	$I = e^{\int \tan x dx} = e^{\ln \sec x} = \sec x$	M1: Attempt integrating factor $e^{\int \tan x dx} \text{ needed}$ A1: Correct integrating factor,} $\sec x \text{ or } \frac{1}{\cos x}$	dM1A1
	$y \sec x = \int (2\sin x \cos x + \sec^2 x) dx$	Multiply through by their IF and integrate LHS (integration may be done later) $yI = \int (\text{their RHS}) I dx$	M1
	$y \sec x = -\frac{1}{2}\cos 2x + \tan x (+c)$	M1: Attempt integration of at least one term on RHS (provided both sides have been multiplied by their IF.) OR $\sec^2 x \rightarrow K \tan x$ A1: $-\frac{1}{2}\cos 2x$ or equivalent integration of $2\sin x \cos x$ ($\sin^2 x$ or $-\cos^2 x$) A1: $\tan x$ constant not needed.	M1A1A1
	$y = \left(-\frac{1}{2}\cos 2x + \tan x + c\right)\cos x$ $y = \left(-\cos^2 x + \tan x + c\right)\cos x$ $y = \left(\sin^2 x + \tan x + c\right)\cos x$	Include the constant and deal with it correctly. Must start $y =$ Or equivalent eg $y = -\frac{1}{2}\cos 2x \cos x + \sin x + c \cos x$ Follow through from the line above	A1ft
			(8)
(b)	$x = \frac{\pi}{4} \Rightarrow 5\sqrt{2} = \dots \Rightarrow c = \dots$	Substitutes for <i>x</i> and <i>y</i> and solves for <i>c</i> (If substitution not shown award for at least one term evaluated correctly.)	M1
	$x = \frac{\pi}{6} \Rightarrow y = \dots$	Substitutes $x = \frac{\pi}{6}$ to find a value for y	M1
	$x = \frac{\pi}{6} \Rightarrow y = \dots$ $y = \frac{1}{2} + \frac{35}{8} \sqrt{3}$ or $y = 0.5 + 4.375\sqrt{3}$	Must be in given form. Equivalent fractions allowed.	A1cao
			(3)
NB	(b) There may be no working shown due to Final answer correct (and in required form score 3/3. Final answer incorrect (or decimal applies whether (a) is correct or not.	with no decimals instead of $\sqrt{3}$ seen),	(6)

The transformation T from the z-plane to the w-plane is given by

$$w = \frac{z + 3i}{1 + iz}, \quad z \neq i$$

The transformation T maps the circle |z| = 1 in the z-plane onto the line l in the w-plane.

(a) Find a cartesian equation of the line l.

(5)

The circle |z - a - bi| = c in the z-plane is mapped by T onto the circle |w| = 5 in the w-plane.

(b) Find the exact values of the real constants a, b and c.

(6)

8.	$w = \frac{z + 3i}{1 + iz}$				
(a)	$z = \frac{w - 3i}{1 - iw} \text{ oe}$	M1: Attempt to make <i>z</i> the subject A1: Correct equation	M1A1		
	$ z = 1 \Rightarrow \left \frac{w - 3i}{1 - iw} \right = 1 \Rightarrow w - 3i = 1 - wi $ $\therefore u + iv - 3i = (u + iv)i - 1 $	Uses $ z = 1$ and introduce " $u + iv$ " (or $x + iy$) for w	M1		
	$u^{2} + (v-3)^{2} = u^{2} + (v+1)^{2}$	Correct use of Pythagoras on either side.	M1		
	v = 1 oe	v = 1 or $y = 1$	A1		
			(
	Alternative 1 for (a)				
	eg $w(1) = \frac{1+3i}{1+i} = 2+i$	M1: Maps one point on the circle using the given transformation A1:Correct mapping	M1A1		
	$\operatorname{eg} \ w(-i) = \frac{2i}{2} = i$	Maps a second point on the circle	M1		
	v = 1 oe	M1: Forms Cartesian equation using their 2 points $A1: v = 1 \text{ or } y = 1$	M1A1		
		A1. V = 101 y = 1			
	Alternative 2 for (a)				
	$z = \frac{w - 3i}{1 - iw} \text{oe}$	M1: Attempt to make z the subject A1: Correct equation	M1A1		
	$ z = 1 \Rightarrow \left \frac{w - 3i}{1 - iw} \right = 1 \Rightarrow w - 3i = 1 - wi $ $ w - 3i = w + i = w - (-i) $	Uses $ z =1$ and changes to form $ w = w $ or draws a diagram	M1		
	Perpendicular bisector of points $(0,3)$ and $(0,-1)$	Uses a correct geometrical approach	M1		
	v=1 oe	v = 1 or $y = 1$	A1
